

Group 16G25 Lab Project

Internal Meeting Notes

Attendance: Scott Hazelhurst, Paul Cresswell, James Allingham
Minutes noted by: James Allingham

5 July 2016
14:30 - 15:00

1 Project Scope

This meeting revisited the discussion of project scope from the meeting held on 27-06-2016.

- James brought up a proposed scope for the project with multiple stages depending on how well the project is progressing. Scott added a new first stage. Each stage is based on the type of data being used for training and testing. The stages are:
 1. Small, handmade examples
 2. Larger examples generated using the GAMETES tool
 3. More realistic (in terms of structure) examples created using PLINK
 4. Real data (depending on viability)
- It was discussed that at each new stage new strategies would be required to handle to data
- Scott pointed out that testing using real data might allow for further publication of work

2 Data Generation

- James and Paul brought up some questions regarding the data generated by GAMETES and PLINK
- Scott explained and clarified all of the points

3 Proposal Format and Content

- Paul brought up some questions about the report content and format for the project proposal
- Scott clarified his requirements as well as offered to read the first drafts of the proposals
